Fondo vs. Fabrik Finance PRD: Missing Features Analysis

I reviewed your Fabrik Finance PRD.pdf and compared its requirements with Fondo's product offering.

The key finding is that Fabrik already covers many of Fondo's core bookkeeping capabilities, including AI transaction categorization, document extraction, financial reports, reconciliation-related workflows, and AI-powered financial questions.

The biggest gaps are in tax services, broader integrations, and deeper accounting operations. Your PRD also includes features that go beyond Fondo's basic bookkeeping proposition, particularly agricultural funding discovery, funding eligibility matching, and 13-week cash-flow forecasting.

Fabrik Finance PRD.pdf

1. Features Fondo has that are missing from Fabrik's Expo MVP

These are the clearest gaps based on Fondo's current official website and the requirements in your PRD.

Legend: Missing means not specified as an implemented feature in the Expo MVP—not necessarily absent from every section or future plan in the full document.

#	Fondo feature	Status in your PRD	Priority to consider
1	Corporate tax preparation and filing	Explicitly out of scope	High — future phase

2	R&D tax credit calculation and filing	Explicitly out of scope	High — future phase
3	Federal, state and Delaware franchise tax compliance	Not included in Expo MVP	High — future phase
4	Bookkeeping frequency selection — monthly, quarterly or annual	Monthly close is defined; customer-selected close frequency is not	Medium
5	Investor-ready financial statements and GAAP-compliant accrual bookkeeping	Financial reports exist, but these specific service requirements aren't fully defined	Medium
6	Catch-up bookkeeping for historical or incomplete accounts	Not explicitly defined	Medium
7	Tax document approvals, signatures and filing tracking	General document processing exists, but this tax-specific workflow does not	Medium
8	Dedicated accounting-team support	Human bookkeepers and reviewers exist, but a named, dedicated customer accounting team isn't specified	Medium

Fondo advertises bookkeeping, corporate taxes and R&D tax credits as a combined service, with accountants supporting the work.

Fondo

+2

The most important distinction is that Fabrik's AI bookkeeping engine is already well covered in the PRD. You don't need to add a second transaction-categorization system just to match Fondo.

Your PRD explicitly places tax filing and R&D tax credits outside V1, so those are roadmap decisions rather than accidental omissions.

Fabrik Finance PRD.pdf

2. Integrations Fondo supports that Fabrik's MVP doesn't include

Fondo connects accounting with other systems that hold banking, spending, payroll and revenue data. Your PRD discusses these integrations in its research section, but the final Expo MVP does not commit to implementing most of them.

Integration / capability	Fondo ecosystem	Fabrik Expo MVP
Accounting / general ledger	QuickBooks Online and Xero	QuickBooks Online only
Business banking	Mercury	Not included
Corporate cards and expenses	Brex, Ramp	Not included
Payroll	Gusto, Rippling, ADP and others	Not included
Revenue and payments	Stripe	Not included
Subscription revenue	Chargebee	Not included

Contractor / international payroll	Deel	Not included

Fondo's official materials describe its accounting service alongside connected financial tools, while your PRD restricts the Expo MVP to QuickBooks Online.

Fondo
+1
Fabrik Finance PRD.pdf

My recommendation: Don't build every connector for January. Start with QuickBooks Online, then prioritize integrations based on which missing data most affects your agricultural customers' cash-flow forecasts and financial reporting.

3. Smaller product-experience gaps worth considering

These are not necessarily standalone modules, but they could make Fabrik feel more like a complete finance service.

Flexible bookkeeping schedules

Let customers choose a monthly, quarterly or annual bookkeeping service. Fondo advertises these options, whereas Fabrik's PRD defines a monthly-close workflow.

Fondo
+1

Historical books cleanup

Allow a business to bring older or incomplete accounting records up to date. Fondo offers catch-up bookkeeping in some of its packages.

Y Combinator Extension
+1

Dedicated accountant relationship

Consider assigning a consistent accounting contact to each customer. Fabrik already has bookkeepers and reviewers internally, but a named customer-facing accountant is not a clearly defined requirement.

Mercury
+1

4. What you should add to the PRD first

I'd divide the potential additions into three phases so that the Expo MVP remains manageable.

Phase 1

Strengthen the existing MVP

- Clarify whether bookkeeping is monthly-only or configurable.
- Define how customers receive accounting support.
- Add explicit historical-data import and cleanup requirements if needed.

Phase 2

Expand accounting integrations

- Add banking, payroll and corporate card connectors.
- Prioritize Mercury, Ramp and Gusto, as already proposed in the PRD's integration recommendations.
- Use the additional data to improve reconciliation and forecasting.

Phase 3

Add tax services

- Corporate tax preparation and filing.
- Eligible tax credit identification and filing.
- Tax document collection, approval and filing status tracking.

Final takeaway

Fabrik doesn't need to copy Fondo feature for feature. Your product has a different target market and a broader financial-intelligence proposition.

Fondo focuses on startup bookkeeping, tax compliance and R&D credits. Fabrik focuses on agricultural finance, government funding opportunities, business scenarios and cash-flow forecasting.

The best features to borrow are the ones that make financial operations more complete: flexible bookkeeping, historical cleanup, connected financial data and—when your roadmap permits—tax services.

For the Expo MVP, I would keep the focus on the existing core experience and make the future tax and integration roadmap explicit rather than expanding the current scope.
